SOC 2 in Under 2

What is SOC 2 anyways?

Service Organization Controls 2

Set of compliance requirements for technology-based companies that **store data in the cloud.**

Voluntary compliance standard that specifies how an organization should manage **internal controls.**

The AICPA developed a set of criteria when evaluating an organization's controls relevant to the **Trust Service**

1. **Security**
2. **Availability**
3. **Processing Integrity**
4. **Confidentiality**
5. **Privacy**

Why do you need SOC 2 compliance?

- Prospects often request your SOC 2 report prior to entering into a business deal
- Competitive edge against other players in the market
- Provides assurance to customers and prospects about your security posture
- Reduces security risks, such as a data breach, human error, or fraud and its consequences

Past SOC 2 Challenges

- Disrupts employees' key responsibilities and delays company growth, especially startups
- Manual, administrative and time-consuming process
- Costs involved, such as: auditor costs, consultant costs and additional software costs
- If the auditor notes deviations, it could result in a failed report

How does automation solve the problem?

- Automated evidence collection means no more manual, administrative tasks
- Frees teams to be more productive and continue work as usual
- Easy to manage with all SOC 2 workflows in one place
- Remain compliant with 24/7 monitoring

- More cost-effective
- Eliminates human error
- 90% faster
